

The **TPL Birdy WP Charger** Charger is an optional device if a rechargeable battery is preferred over the standard "AA" alkaline battery supplied with the WP pager. When charging, the pager will alert if receiving a message and a red LED indicator on the Charger will flash.

An AC power adapter is included in the Charger package. An auxiliary connector is located on the back of the Charger and can control remote contact relay operation. Charging time for a typical rechargeable battery is estimated to be approximately 5 hours.
